

Stop the Energy Leak!

The Easiest Way to Lower Your Utility Bills and Improve Home Comfort is by Installing a Stairway Attic Insulator

The Problem:

The "Open Window" in Your Ceiling

Did you know that an uninsulated attic door can leak air and create an "open window effect" letting heat, cold air and moisture into your home? Most attic doors are just thin sheets of plywood. This creates a "chimney effect" where your expensive heated or cooled air escapes directly into the attic, forcing your HVAC system to work overtime.

The Solution:

The Attic Tent/Stairway Attic Insulator is an engineered insulator designed to create an airtight seal over your attic access. It acts as a thermal barrier, keeping your conditioned air where it belongs—inside your home.

Key Features:

- High Thermal Resistance block up to 94% of heat transfer maximizing HVAC Efficiency
- Reduces Heat, Moisture and Cold Air coming from the attic to the living space
- Eliminate Drafts Stop the "hot spots" in the summer and "cold drafts" from your attic
- Improved Air Quality and Home Comfort reducing dust, allergens, fiberglass particles and pest control chemicals from entering the home
- Acts as a Pest Barrier creating a tight seal that helps prevent insects and rodents from entering through the attic door
- Reduces attic door and frame warping by keeping heat and moisture in the attic
- Easy Install with Zipper Access allowing for easy entry into the attic
- Standard Size (L X W X H) 25" X 54" X 11"
- 10 Year Warranty
- Professional Grade Series Built for Contractors

Easy to Install

The nail gun must be used for installation and it could be fixed with ordinary nails.
